

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

For the three months ended March 31, 2017

May 25, 2017

GENERAL

This Management Discussion and Analysis ("MD&A") is dated May 25, 2017 and is in respect of the three month period ended March 31, 2017. The following discussion of the financial condition and results of operations of Metals Creek Resources Corp. (the "Company") constitutes management's review of the factors that affected the Company's financial and operating performance for the three month period ended March 31, 2017.

The discussion should be read in conjunction with the Company's condensed interim financial statements and corresponding notes to the financial statements for the three month period ended March 31, 2017 and the annual audited financial statements and corresponding notes to the financial statements for the year ended December 31, 2016, the most recently completed fiscal period. Unless otherwise stated, all amounts discussed herein are denominated in Canadian dollars which is the Company's functional and reporting currency.

Additional information relevant to the Company's activities can be found on SEDAR at www.sedar.com.

GOING CONCERN

The condensed interim financial statements of the Company for the three month period ended March 31, 2017 have been prepared in accordance with International Financial Reporting Standards ("IFRS") on the basis applicable to a going concern. The appropriateness of using the going concern basis is dependent upon, among other things, future profitable operations, and the ability of the Company to raise additional capital. Specifically, the recovery of the Company's investment in exploration and evaluation assets is dependent upon the discovery of economically recoverable reserves, the ability of the Company to obtain necessary financing to develop its properties and establish future profitable production from the properties, or from the proceeds of their disposition.

The Company is an exploration stage company that has not earned any significant revenues to date, is in the process of exploring its exploration and evaluation assets and has not yet determined whether these properties contain ore reserves that are economically recoverable.

OVERVIEW OF BUSINESS

The focus of the Company is to seek out and explore mineral properties of potential economic significance and advance these projects through prospecting, sampling, geological mapping and geophysical surveying, trenching, and diamond drilling in order for management to determine if further work is justified. The Company's property portfolio consists of projects focusing on gold, base metals and platinum group metals.

FINANCIAL AND OPERATIONAL PERFORMANCE

Financial Condition

The Company's cash balance as at March 31, 2017 was \$167,220 (December 31, 2016 - \$61,649) and short term investments totaling \$1,624,442 (December 31, 2016 - \$1,821,264) of which \$411,637 (December 31, 2016 - \$573,495) is restricted for flow-through purposes. All investments are held in fully liquid instruments with Canadian Financial Institutions.

Current assets of the Company as at March 31, 2017 were \$1,655,786 compared to \$2,061,991 as at December 31, 2016. The decrease was attributable to general and administrative expenses and exploration and evaluation expenses incurred during the period and funded from current assets.

Total assets as at March 31, 2017 were \$7,196,695 compared to \$7,215,830 as at December 31, 2016.

Current liabilities as at March 31, 2017 were \$199,638 compared to \$75,705 at December 31, 2016 related to the timing of expenditures around the period end.

Shareholders' equity decreased to \$6,997,057 from \$7,140,125, as a result of the current period's loss and comprehensive loss.

Results of Operations

The Company earned interest and investment income of \$4,392 during the period ended March 31, 2017 (March 31, 2016: \$3,460) as a result of investment income earned on short term investments during the year. In addition, the Company recorded a gain on sale of exploration and evaluation assets of \$11,800 (March 31, 2016: \$1,125) related to option agreements on the Squid East property and receipt of White Metal Resources Corp. shares from escrow related to the Mealy project. In addition, the Company recorded a gain on the disposal of long term investments during the period of nil (March 31, 2016: \$19,096).

Total expenses for the period ended March 31, 2017 were \$211,793 compared to \$202,435 for the comparative period, a marginal increase. After-tax Comprehensive loss for the period ended March 31, 2017 was \$194,903 or nil loss per share versus an after tax comprehensive loss of \$153,367 or \$0.01 loss per share in the previous year's comparative period.

Expenses incurred during the three month period ended March 31, 2017 consist of:

- i) Business development of \$51,297 (March 31, 2016 - \$21,151) (increased due to an increase in investor relations and promotion activity during the current period)
- ii) Depreciation of capital assets of \$2,989 (March 31, 2016 - \$2,021)
- iii) Office and general of \$26,795 (March 31, 2016 - \$23,696) (representing office supplies, printing, and presentations, consulting and occupancy costs)
- iv) Professional fees of \$11,710 (March 31, 2016 - \$20,000) (these amounts include legal, audit and accounting and consultants)
- v) Salaries and benefits of \$85,106 (March 31, 2016 - \$92,670) (decrease due to fewer technical personnel)
- vi) Share-based payments of \$51,835 (March 31, 2016, 2014 - \$54,205) (recorded upon vesting of stock options to employees, directors and officers and is dependent upon vesting levels in a given period)
- vii) Write-down of exploration and evaluation assets of \$2,127 (March 31, 2016: 7,812) (due to no near term work planned on certain of the Company's exploration and evaluation assets due to efforts to preserve capital).
- viii) Pre-acquisition exploration and evaluation expenses of \$20,787 (March 31, 2016 - \$9,132) (which consists of costs incurred to evaluate potential exploration properties, prior to acquiring a legal right to the properties, and declined in the current year's period)
- ix) Adjustments to fair value for fair value through profit and loss investments of \$40,853 (unrealized gain) (March 31, 2016 - \$28,352 (unrealized gain)) (which represents the unrealized change in fair market value of the Company's long-term investments)

The cumulative deficit from inception of the Corporation is \$12,817,649.

Cash Flows

Cash provided by operating activities of \$60,444 during the period ended March 31, 2017 versus cash used in operating activities of \$215,345 in the comparative year.

Cash flows from financing activities was \$196,822 in the current period versus cash flows from financing activities of \$103,053 in the prior year's comparative period related net redemptions of temporary investments.

Cash flows used in investing activities was \$151,695 for the period March 31, 2017 versus cash flows provided by investing activities in the amount of \$48,524 for the comparative period.

SUMMARY OF QUARTERLY RESULTS

The following table sets out selected quarterly information for the eight most recent completed quarters since incorporation (adjusted for the effects of the 1 for 7 share consolidation).

	Period Ended Mar/17	Period Ended Dec/16	Period Ended Sep/16	Period Ended Jun/16	Period Ended Mar/16	Period Ended Dec/15	Period Ended Sept/15	Period Ended Jun/15
Revenue – Interest Income (loss)	\$4,392	\$5,147	\$2,753	\$2,847	\$3,460	\$3,065	\$3,001	\$3,312
Income (Loss) for the Period	\$(194,903)	\$(101,113)	\$(253,709)	\$(114,570)	\$(153,367)	\$(781,836)	\$(206,655)	\$(267,904)
Income (Loss) Per Share	-	\$(0.01)	\$(0.01)	-	-	\$(0.05)	\$(0.01)	\$(0.02)

SELECTED ANNUAL FINANCIAL INFORMATION

Year Ended December 31	2016	2015	2014

LIQUIDITY AND CAPITAL RESOURCES

As of March 31, 2017 the Company had cash of \$167,220 (December 31, 2016 - \$61,649) and held short-term investments of \$1,624,442 (December 31, 2016: \$1,821,264) including \$411,637 in short-term investments restricted for flow-through purposes (December 31, 2016 – \$573,495). H.S.T from the Canada Revenue Agency and other receivables at March 31, 2017 were \$23,565 (December 31, 2016 - \$134,249). Prepaid expenses were \$10,690 (December 31, 2016 - \$15,322). Finally, staking security deposits were \$29,507 at March 31, 2017 (December 31, 2016 - \$29,507).

Current liabilities of \$199,638 at March 31, 2017 (December 31, 2016 - \$75,705) includes period end accruals for expenditures on mineral properties, legal and audit fees, consultants and other amounts. These were incurred in the normal course of business and settled subsequently.

Working capital at March 31, 2017 is \$1,655,786 (December 31, 2016- \$1,986,286).

No private placements were completed during the period ended March 31, 2017. During the year ended December 31, 2016, the Company completed the following private placements:

- The Company completed a private placement in two tranches by issuing a total of 5,310,000 flow-through units at \$0.125 per unit, each unit consisting of one flow-through common share and one half of one common share purchase warrant, each whole warrant entitling the holder thereof to acquire one common share of the Company at a price of \$0.18 for a period of 24 months following the closing. In addition, the Company issued 1,249,666 units at \$0.12 per unit, each unit consisting of one common share and one share purchase warrant, each warrant entitling the holder thereof to acquire one common share of the Company at a price of \$0.18 for a period of 24 months following the closing. Total gross proceeds received in the private placement was \$813,710.

The fair value of the 4,383,866 common share purchase warrants received by investors and finders have been estimated at \$538,770 using the Black-Scholes option pricing model for the following assumptions: dividend yield of 0%, expected volatility of 218%, a risk-free interest rate of 0.56%-0.63%, and an expected life of 2 years.

In connection with the private placement, the Company issued 479,200 finders warrants (included above) having the same terms as the warrants issued in the private placement and described above and in addition, paid finders fees and other commissions equal to \$62,530. All securities issued are subject to a four month hold period from the date of issuance.

- The Company completed a private placement (“Private Placement”) for aggregate gross proceeds of \$1,370,000. The Private Placement consisted of the issuance of 13,700,000 units at a price of \$0.10 per unit. Each unit consists of one common share and one common share purchase warrant, each whole warrant entitles the holder thereof to purchase one additional common share of the Company at an exercise price of \$0.16 per common share for a period of 36 months from the date of issue. An aggregate of 13,700,000 warrants were issued under the Private Placement. In connection with the Private Placement, the Company issued 1,061,200 finder’s warrant entitling the holders to purchase one additional common share of the Company at an exercise price of \$0.10 per share during the 36 months from the closing date. The Company also paid finder’s fees and other commission equal to \$106,120. All securities pursuant to the Private Placement are subject to a four month hold period from the date of issuance.

The fair value of the 14,761,200 common share purchase warrants received by investors and finders have been estimated at \$749,653 using the Black-Scholes option pricing model for the following assumptions: dividend yield of 0%, expected volatility of 192%, a risk-free interest rate of 0.58%, and an expected life of 3 years.

The deferred premium on flow-through shares in the amount of nil (December 31, 2016 – nil) consists of the premium portion of 7,870,000 flow-through shares issued at between \$0.09 and \$0.10 per unit during the 2015 year. The difference between the closing prices and the issued prices, net of the value of the one-half warrant issued with each share, is treated as a liability in accordance with IFRS. This liability is reversed into earnings as the Company incurs flow-through eligible exploration and evaluation expenditures. This reversal amounted to nil for the year ended March 31, 2017 (March 31, 2016 – \$25,387). There was no deferred premium associated with the flow-through shares issued during the year ended December 31, 2016.

At this time the Company does not own or operate any revenue producing mineral properties, and accordingly, does not have cash flow from operations. The Company raises funds for exploration, development and general overhead and other expenses through the issuance of shares from treasury. This method of financing has been the principal source of funding for the Company since inception.

The Company also funds exploration at certain of its other properties through payments received from option agreements with other companies who have agreed to fund exploration in exchange for the right to earn an interest in the properties.

In addition to the funds in the Company’s treasury, the Company intends to continue raising funds for future exploration and general overhead and other working capital through the continuation of issuances of shares from treasury and through earn-in or option agreements with other mineral exploration and mining companies.

The Company applies the fair value method of accounting for share-based payments to directors, officers, and employees and accordingly \$51,835 (March 31, 2016 - \$54,205) is recorded as share-based payments expense and under capital stock as reserves for the 576,729 options vesting to directors, officers, employees and consultants during the period ended March 31, 2017.

The Company funds its project expenditures by raising equity financing. If in the event that future private placement financings cannot be completed, the Company would have to review its budgeted project expenditures and revise where necessary including reviewing property option agreements to determine if continuation in such agreements on their anniversary dates is feasible. Management continues to seek out capital required to undertake its exploration work commitments and for working capital to meet project work commitments.

The Company has an obligation to expend \$411,637 on qualified Canadian exploration expenditures related to a private placement from which flow-through shares were issued during the year ended December 31, 2016. These funds must be fully expended on qualified Canadian exploration expenditures by December 31, 2017. The Company is in compliance with all mineral property obligations to the best of the Company's knowledge.

MINERAL PROPERTIES

Mineral property acquisition, exploration and development expenditures are deferred until the properties are placed into production, sold, impaired or abandoned or if substantive expenditure on further exploration and evaluation is neither budgeted or planned. These deferred costs will be amortized over the estimated useful life of the properties following commencement of production or written-down if the properties are allowed to lapse, are impaired or are abandoned or if substantive expenditure on further exploration and evaluation is neither budgeted or planned. The deferred costs associated with each property are as follows:

For the three month period ended March 31, 2017

(a) Dog Paw Gold

In 2007, the Company has acquired an option on the Dog Paw gold project which is located approximately 40 km east of Kenora, Ontario and consists of 14 claims totaling 160 units. The company has entered into an option agreement with Endurance Gold Corp. whereby under the First Option, as defined in the agreement, the Company has earned a 70% interest in the property by making share payments totaling 400,000 shares and completing work commitments of \$200,000 on the property. During 2010, the Company earned in for the Second Option, as defined in the agreement, gaining a further 5% in the property by issuing a 50,000 common shares and spending an additional \$250,000 on the property. With the Company earning in on the Option and having earned a 75% interest in the Property, a joint venture has been formed on a 75% (the Company) and 25% (Endurance Gold Corp.) basis. The Company recovered \$33,909 from Endurance Gold Corp. during 2010 for their share of the joint venture expenditures. This recovery reduced the carrying value of the Dog Paw project.

The share payments were issued as follows:

First Option	400,000 common shares (issued March 30, 2007)
Second Option	50,000 common shares (issued June 9, 2008)

The Dog Paw Lake Property lies within the central portion of the east-trending Wabigoon Sub-province and is host to numerous gold occurrences which have seen little exploration. This western part of the Wabigoon greenstone belt is an emerging gold camp with exciting drill intercepts coming from both Houston Lake Mining (Dubenski Showing) and Rainy River Resources (17 Zone, and ODM Zone). The Cameron Lake Deposit is currently the subject of a buyout by Coventry Resources from Nuinsco Resources. This project will be the subject of a review and drill program in late 2010.

During 2008-2012 period, the company performed systematic prospecting/mapping and trenching programs on the Dogpaw property to help better define and advance known gold occurrences as well as advance the property through discovery of additional mineralization. Prospecting in 2008 resulted in the discovery of 3 new gold showings on the Stephens Lake claim block, with assays up to 18.56 g/t gold within a broad zone of carbonate alteration and associated pyrite mineralization within what is interpreted to be North-South trending structures up to 50m in width. Very little historic work has been performed in the vicinity of the 3 newly discovered gold showings. 2009 saw a continuation of additional prospecting and geological mapping to further advance our understanding of the Stephen's Lake claim block as well as evaluating the historic Flint Lake Zone which returned assay results ranging 0.34g/t (grams per tonne) to 133.2 g/t gold from 26 surface grab samples. Mineralization within the main Flint Lake Zone is hosted within quartz veins with 5-15m wide shear zones. Visible gold was noted within these quartz veins. 2010 saw the cutting of 3 grids over the Flint lake, Stephen's lake and Bag lake zones as well as an induced polarization (IP) ground geophysical program for the purpose of better defining known zones of mineralization. Additional follow-up mapping and prospecting was initiated as well. During 2012, the Company completed prospecting and a trenching program on the Flint Lake portion of the Dog Paw project. The trenching program targeted both the Flint Lake and Stephens Lake occurrences which are separated by approximately five (5) kilometers. These occurrences host a number of discrete gold zones that are being advanced to a drill testing stage. The best trenching results were from the Stephens Lake occurrence, which is hosted within the Stephens Lake granodiorite stock. Highlights from the trenching program include trench STR2 in the D-Zone target, which returned a surface channel cut of 1.43 g/t gold over 21 meters. As a matter of interest, the trench started in mineralization with the first channel sample assaying 737 parts per billion ("ppb") gold, and ended in mineralization with the last sample assaying 373 ppb gold. The zone remains completely open in all directions as the trench terminates in overburden on both ends, with mineralization interpreted to continue through trench STR3, which returned a surface channel cut of 1.42 g/t gold over 10 meters. At Stephens Lake, a second parallel zone of gold mineralization (Busch Zone) was also trenched, trenches STR4 through STR7. Trench STR7 returned a surface channel interval of 1.03 g/t gold over 20 meters.

The Company is currently conducting conservative exploration programs on the project and has written off a portion of the deferred exploration and evaluation expenditures totaling nil (December 31, 2016 - \$18,110) during the period.

(b) Ogden Township Property – Goldcorp Option

During 2008 the Company signed an option agreement with Goldcorp Canada Ltd. ("Goldcorp") to jointly explore Goldcorp's mining claims located in Ogden and Deloro Townships, located six km south of Timmins city centre, Ontario. The package consists of 84 patented and unpatented claims totaling approximately 1,184 hectares (the "Property") and covers eight kilometers of strike length along the east-west striking, highly prospective, Porcupine-Destor "Break". The Dome Mine complex and five large past producers are located between three and eight kilometers to the east of the Property along the gold trend. Past production of these mines include: the Delnite (920,000 oz), Aunor (2,502,000 oz), Buffalo-Ankerite (957,000 oz), Paymaster (1,192,000 oz), and Preston (1,539,000 oz). Goldcorp's current operation at the Dome Mine Complex is located 8 km from the Property, and has produced in excess of 17 million oz. of gold to date. (Source: Government of Ontario, MNDM, Gold Production in the Timmins Regional Resident Geologist's District to the end of 2006). Recent discoveries in the district include Lake Shore Gold's Timmins West project, located 10 km to the west of the Property and currently producing gold from several zones. The Timmins West Project is along the same gold trend as MEK's Ogden project.

The agreement allows for the Company to earn 50% of Goldcorp's interest in the Property by funding total expenditures on the Property of \$3,100,000 over four years as follows (**completed**):

- (i) \$400,000 in year one;
- (ii) \$700,000 in year two; and
- (iii) \$1,000,000 in each of years three and four.

The Company will also make cash and share payments to Goldcorp as follows (**completed**):

- (i) \$40,000 cash and \$25,000 worth of common shares on signing,
- (ii) \$35,000 cash and \$25,000 worth of common shares on the first anniversary,
- (iii) \$35,000 cash and \$50,000 worth of common shares on the second anniversary,
- (iv) \$100,000 worth of common shares on the third anniversary, and
- (iv) \$150,000 worth of common shares on the fourth anniversary.

The Company has met all obligations with regards to the above mentioned agreement and have since formed a joint venture in which Metals Creek owns 50%, and Goldcorp Canada Ltd. ("Goldcorp") owns 50% (as manager and on behalf of the Porcupine Joint Venture. If either party becomes diluted to a 10% interest, that interest will be converted into a 2% Net Smelter Return Royalty.

Within the Property, the Porcupine-Destor Break is represented as a sheared and altered contact between ultramafic and mafic volcanics. A discontinuous Timiskaming-aged conglomerate and a variety of felsic porphyries are found proximal to the Break with carbonate and sericite alteration being widespread. The Property hosts the past producing Naybob Mine, which had historic gold production of 50,731 oz (source: Government of Ontario, MNDM, Gold Production in the Timmins Regional Resident Geologist's District to the end of 2006). Drilling in the past has been wide spaced and shallow with most of the drilling concentrated near the Naybob Mine and a cluster of shallow holes in the Thomas Ogden Zone, located 4 km to the west. Prior to 2000, claim ownership and gold exploration was disjointed and the Property had been comprised of at least six separate packages. Since then, the properties have been combined and a more systematic exploration approach has been made possible.

Since the signing of this option joint venture agreement with Goldcorp Canada ltd. and Goldcorp Inc. in November, 2008, Metals Creek has drilled a total of 113 diamond drill holes totaling 30,295 meters. The majority of these holes targeted both the Naybob South mineralized horizon and the Thomas Ogden Zone which is located 4km to the west.

During 2009, the Company announced the results of data compiled on the Property identifying 3 historic zones of gold mineralization, including the Thomas Ogden Zone, the Naybob South Zone and the Naybob North Zone. Both the Naybob South and Naybob North Zones have seen differing degrees of development and production which includes historic production of 50,731 oz of gold (Source: Government of Ontario, MNDM, Gold Production in the Timmins Regional Resident Geologist's District to the end of 2006).

The Naybob North Zone was the focus of underground development down to 411m, including 11 levels, with the majority of the production occurring within the upper 6 levels. The Naybob South Zone is located approximately 155m to the south and sub-parallel to Naybob North Zone and has seen substantially less development. The Thomas Ogden Zone is located 4 km west of the Naybob mine. Drilling in the past has been wide spaced and shallow with

most of the drilling concentrated near the Naybob Mine and a cluster of shallow holes in the Thomas Ogden Zone. Outside of these two areas has seen very little exploration drilling. A linear 4km prospective IP (Induced Polarization) ground geophysical anomaly has been identified over a majority of the 4 km between the two zones and remains relatively untested and adds to the exploration potential for additional resource discovery on the property.

The Naybob South Zone provides an excellent exploration target with historic near surface results including down hole intercepts of 5.37m of 6.33 g/t Au and 1.83m of 11.85 g/t Au. Historically, 600m of mineralization has been defined down to a depth of approximately 200m vertically. Near surface high grade mineralization has been a focus for the Corporation on the Naybob South Zone as well as targeting for possible mineralized zones at depth.

Initially, the majority of the exploration work conducted by the Corporation was focused on the Naybob South Zone targeting mineralization within 100m of surface since this was the most drill ready target as well as it's close proximity to Goldcorp's mine and mill complex. Highlights of drilling performed by the Corporation on the Naybob South zone are listed below.

Highlights:

- OG09-012 6.61m down hole intercept (45.24m to 51.85m) of 9.244 g/t Au including 0.76m (45.24m to 46.00m) of 50.132 g/t Au
- OG10-025 7.0m down hole intercept (46.0m to 53.0m) of 5.68 g/t Au.
- OG11-02 6.63m down hole intercept (87.80m to 94.43m) of 6.217 g/t Au

More recent drilling by the Corporation on the Naybob South zone targeted the western portion of the 600m mineralized trend as well as further defining a potential second zone of mineralization parallel and footwall to the south dipping Naybob South main zone. Results include 7.03 g/t gold over 2.16m from hole OG15-039 with associated strong albization and associated pyrite and arsenopyrite mineralization.

The Thomas Ogden Zone which is located 4 kilometers west of Naybob South has seen a significant increase in the amount of work being performed over the last couple of years. This is primarily due to a better understanding of the geology and geometry of the mineralized zone thus resulting in greater success from recent drilling. Historically, the Thomas Ogden Zone has seen exploration back as far as the 1930's with the intersection of mineralized porphyries from historic drilling. Historic grades include 1.51 g/t gold over 21.4m and 1.01 g/t gold over 37.2m. These results are historic in nature and have not been verified. Recent drilling by Metals Creek has resulted in a clearer understanding of the geology related to the gold mineralization in particular the complex nature of the porphyry style mineralization which seems to be key with regards to the emplacement of gold. Recent interpretation of the structural complexity of the Thomas Ogden Zone has led to the identification of a close correlation of higher grade gold intercepts in close proximity to the fold hinges. The identification of structural folding within the zone itself has greatly aided in the engineering of drill holes. Increasing the drill density and extending the near surface mineralization to depth has been the focus of recent drill programs. Some deeper drilling following-up on a down hole geophysical IP (Induced Polarization) has resulted in the discovery of additional gold mineralization at depth including an intercept of 13.07 g/t gold over 2.88m which represents to the deepest hole to date within the TOG zone to intersect gold. This gold mineralization also coincides with a significant flexure in the Thomas Ogden Stratigraphy at depth, thus making this new target a high priority going forward. This deeper drilling has confirmed the extension of higher grade gold associated with the fold hinges to depth greatly enhancing the potential to extend gold mineralization to depth. Gold mineralization has now been traced in excess of 400m and still open in both directions and at depth. A summary of significant holes within the Thomas Ogden Zone is listed below.

- TOG10-021 75.85m intercept of 1.94 g/t gold including 23.4m intercept of 4.37 g/t gold. Near surface intercept.
- TOG11-011 94.0m intercept of 1.92 g/t gold. Near surface intercept.
- TOG12-03 27.5m intercept of 1.143 g/t gold and 23.3m intercept of 5.728 g/t gold. Near surface intercept
- TOG11-02 3.28m intercept of 9.408 g/t gold. Deep mineralization.

- TOG11-08 2.88m intercept of 13.07 g/t gold. Deep mineralization
- TOG12-05 15.0m intercept of 5.04 g/t gold.
- TOG12-07 9.46 g/t gold over 18.55m
- TOG13-025 12.53m intercept of 210.19 g/t gold

On June 19, 2012, the Corporation announced that it has sent formal notice to Goldcorp informing them that the Corporation has met the expenditure requirements to earn a 50% interest in the Ogden Gold Property located in the Timmins Gold camp. Final share issuance has also been submitted. The Company has now earned a 50% interest in the Ogden Property and Goldcorp has up to six months to inform the Company of its decision regarding three options. These options include whether it will fund an on-going exploration program at 50%, reduce its interest by not contributing to an exploration program or exercise a 20% back-in by committing to make a cash payment to the Company, funding a total of 4.1 million dollars in exploration expenditures and completing a feasibility study.

During 2012, the Corporation received notification from Goldcorp Canada Ltd. and Goldcorp Inc. (“Goldcorp”) that it does not intend to pursue its “Back-in Right” on the Ogden Township property. This now paves the way to formalize a 50/50 joint venture with Goldcorp, to continue exploring the Ogden property. The Company will be the operator and subsequent programs will be funded on a 50/50 basis while both companies contribute its share of required funding.

Drilling performed in 2016 resulted in the discovery of high grade mineralization 480m west of the Thomas Ogden Zone (TOZ). Results include 5.06 g/t gold over 2.6 meters within a moderately to strongly altered Timiskaming sediment with associated pyrite and arsenopyrite mineralization. With this new discovery of high grade mineralization west of TOZ, additional holes are currently being planned to further define the extent of the high grade mineralization and determine if it is the extension of the TOZ zone.

The Company announced in June 2016 that it completed diamond drilling in three holes totaling 1337 meters in an attempt to better define the Thomas Ogden Stratigraphy west of TOG and to follow-up on the previously announced results from OG15-040 which returned a down hole intercept of 5.06 grammes per tonnes (g/t) over 2.6 meters (m) in the newly discovered 15-40 zone.

TOG-16-46 was drilled 100 meters east of OG15-040, and returned a down hole intercept (282.0-288.58m) of 1.19 g/t over 6.58m. This intersection is described as a strongly altered conglomerate and greywacke characterized by heavy albitization and silicification associated with 1 to 8% disseminated pyrite and local arsenopyrite. A second zone of mineralization was also intersected in hole TOG-46-46 returning a down hole intercept (270.95-272.95m) of 1.30 g/t gold over 2.0m with similar style alteration and mineralization. Reported drill intercepts are not true widths. At this time there is insufficient data to calculate true orientations.

Holes TOG-16-44 and 45 did not return any significant results while encountering similar style alteration to that of TOG.

Management is highly encouraged by the 15-40 zone results to date as it is reminiscent of the first drilling at the Thomas Ogden Zone. Drilling on the Ogden Property will resume once results are compiled and future drill targets are prioritized.

In addition, the Company has been accepted to participate in the Junior Exploration Assistance Program (JEAP) grant of up to 33.3% of approved exploration expenses up to a maximum of \$100,000 on the Ogden Project. The Company would like to thank the Northern Ontario Heritage Fund and the Ontario Prospectors Association for the opportunity to participate in this program. Subsequent to December 31, 2016, the Company received the \$100,000 grant. The grant was fully accrued in the 2016 fiscal year and reflected as a reduction of the deferred exploration and evaluation costs associated with the Ogden project.

During the 2016 year and in the current period, the Company announced drill results from the completed six hole drill program on the Ogden project. A total of 2382m was drilled, targeting the down dip extension of the Thomas Ogden Zone as well as testing for secondary fold structures. Results from the first hole, TOG-16-47, was included

an intersection of 5.73 g/t (grammes per tonne) gold over 8.2m (meters). Highlights from the remaining 5 holes included an intersection of 4.39 g/t over 12.45m from hole TOG-16-48.

TOG 16-48 was a 45m undercut below previously released hole TOG 13-27 which intersected several zones of mineralization including a down hole intercept of 49.96 g/t Au over 9.0m (MEK NR April 10, 2013). Hole TOG 16-48 intersected the zone at a down-hole depth of 199.95m and assayed 4.39 g/t gold over 12.45 m. This intersection is typical of the TOG Zone and is described as a strongly altered felsite and conglomerate characterized by strong albitization and silicification with associated disseminated pyrite, local arsenopyrite and visible gold.

Results from all drill holes in the recent program are included as table 1 below:

Hole	Comments	From (m)	To (m)	Interval (m)*	Gold (g/t)
TOG-16-47	Strongly altered conglomerate characterized by strong albitization and silicification associated with 1 to 5% disseminated pyrite, with local arsenopyrite	222.3	230.5	8.2	5.73
TOG-16-48	Undercut to earlier high grade hole (49.96 g/t over 9.0 m)	199.95	212.4	12.45	4.39
TOG-16-49	Albitized conglomerate with V.G.	357.04	362.1	5.06	1.2
TOG-16-50	Upper eastern section of TOG Zone stratigraphy	191.68	196.5	4.82	0.46
	and	223.5	237	13.5	0.34
TOG-16-51	Intersected below interpreted plunge, testing down plunge of TOG	604.32	605.32	1	1.03
TOG-16-52	Upper eastern section of TOG Zone stratigraphy	282	296	14	0.44

Reported drill intercepts are not true widths. At this time there is insufficient data to calculate true orientations.

During the period ended March 31, 2017, the Company initiated a drill program at the property. This drill program will consist of 4 holes targeting Thomas Ogden (TOG), Thomas Ogden West as well as an untested Induced Polarization (IP) ground geophysical anomaly 1 kilometer west of TOG. This untested IP anomaly is interpreted to be on the main host stratigraphy.

Subsequent to March 31, 2017, the Company received encouraging results from the first two holes of the program. Hole OG17-002 was collared to test a geophysical Induced Polarization (IP) target and was successful in intersecting two zones of gold mineralization. The first zone, which is interpreted to be the main zone, intersected 3.97 meters (m) (96.88m to 100.85m) of 4.96 grams per ton (g/t) Gold (Au) within a broader zone which assayed 3.07 g/t Au over 8.22m. This intercept is characterized by pervasive albitization and silicification with associated pyrite-arsenopyrite mineralization as well as visible gold, which is similar to the main zone at TOZ. A second zone, further down the hole, returned a core length intercept (129m to 143m) of 1.43 g/t Au over 14m. This mineralization is hosted within a strongly altered felsic dyke with visible gold and is similar to footwall mineralization in the TOZ. Significant folding of the stratigraphy has been identified, a key indicator in the TOZ area to potentially host higher-grade gold mineralization along the fold hinges.

The second hole, OG17-01 was drilled 150m west of hole OG17-02 and also intersected stratigraphy typical of the TOZ, returning a down hole intercept (76.0m to 93.0m) of 0.24 g/t Au over 17m.

Management is highly encouraged by this latest discovery exhibiting similar alteration and mineralization to that of TOZ and other deposits in the Timmins Camp consisting of albitization, silicification, with associated pyrite, arsenopyrite and minor amounts of galena, sphalerite and visible gold.

(c) White Gold District (Yukon) – Matson Creek/Squid East & West Blocks

During 2012, the Company announced geochemical analysis results from a recently completed C-horizon soil sampling program on its Matson Creek properties in Yukon. This program was following up on anomalous results obtained from a reconnaissance ridge and spur soil sampling program carried out in 2011 (MEK News Release December 1, 2011) The recent program was completed on MEK’s two most westerly claim blocks (Squid East and West Blocks) located near Matson Creek, in the northwest part of the White Gold District. The work was carried out in August of 2012 and consisted of detailed soil sampling on 100 to 200m (meters) spaced lines with soils taken every 25m resulting in a total of 988 samples being collected.

The 2012 soil results delineated a strong northwest trending gold plus pathfinder element anomaly located on the Squid East claim block. Anomalous values are remarkably continuous between sample locations with gold ranging from 15 ppb (parts per billion) to 1086 ppb. Associated with the gold assays are strong pathfinder element results which include Ag from below detection up to 78.5 parts per million (ppm), Pb from 5.3 up to 4493.5 ppm, As from 6.9 up to 50.9 ppm, Sb from 0.1 up to 241.2 ppm, Ba from 133 up to 2370 ppm, and Hg from below detection up to 36.32 ppm. The anomaly has minimum dimensions of approximately 450m long by 200m wide and is coincident with a distinct northwesterly trending magnetic low. Several other Au, As and Ba anomalies are also present within this mag low and will require additional follow-up sampling. The strength and size of this newly discovered anomaly is comparable to soil anomalies associated with the recent discoveries in the White Gold District and the associated pathfinder elements are typical of these new discoveries. Metals Creek would also like to thank the Yukon Government for its support of this project through a financial contribution thru the Yukon Mining Incentive Program (YMIP).

The Company initially staked the Yukon properties in February, 2011 and now has a 100% interest in two separate claim blocks (Squid East and Squid West properties) (148 claims) within the White Gold District. The Matson claims are located upslope from the Matson Creek placer gold operations, approximately 90km southwest of Dawson City. A four wheel drive road accessing the placer operations passes within 3 km of the MEK property.

During 2013, the Company announced the discovery of a new gold occurrence on the Squid East project in the Matson Creek area in the Yukon. The initial phase of exploration consisted of a trenching program focused on a strong northwest trending gold plus pathfinder element soil anomaly located on the Squid East claim block. Chip sampling at the newly discovered “Exploits Zone” from recently completed trench E4-3 returned **1.96 grammes per tonne (g/t) gold over the entire 22 meter (m) trench length. Included in this is a higher grade interval of 6.39 g/t gold over 4.0 m.** Individual chip samples within this zone were 2.0 meters long and ranged from 0.25 g/t to 8.55g/t gold. Trenching was limited to 22m within this portion of the trench due to frost conditions on both ends. Mineralization has not been cut-off in terms of defining the width of the zone and remains open in all directions.

On October 8, 2013, the Company announced final assay results on the 4-hole, 428m drill program at the Exploits Zone on the Squid East project. The results show the new zone to have significant gold and silver mineralization returning assay results up to 1.54 grammes per tonne (g/t) gold (Au), 114 g/t silver (Ag) and 0.31% lead (Pb) over 21 meters (m) in hole SE13-002. This hole also contained a higher grade zone of 2.43 g/t Au and 185 g/t Ag and 0.47% Pb over 12 meters. This drill program was a follow-up the previously announced trenching program resulting in a new gold discovery. This new discovery remains open at depth and along strike as well as to the west since all 3 mineralized holes collared into the zone.

A table of results is shown below:

Hole	From (m)	To (m)	Length (m)	Au g/t	Ag g/t	Pb %
SE13-001	9.00	21.00	12.00	1.699	81.775	0.312
SE13-002	12.00	33.00	21.00	1.547	114.121	0.315
incl.	14.00	26.00	12.00	2.431	185.254	0.470

SE13-003 6.50 13.00 6.50 0.371 39.892 0.664

SE13-004 NO SIGNIFICANT ASSAYS

During 2014, the Company reported results from bottle roll cyanide extraction test work, reporting an average of 92% gold and 81.75% silver recovery from drill core and trench samples at the Squid East project. The primary objective for this metallurgical testing program was to evaluate the leaching characteristics of the weathered gold bearing material intersected in both the drilling and trenching programs completed last summer.

Six samples were collected from the main trench and two drill holes, and these were submitted for both fire assay and bottle roll cyanide analyses. The bottle roll cyanidation process confirmed that the leachable gold recovery in the selected material averaged 92% and that the weathered material could potentially react well to heap leach extraction methods.

The following tables detail the results.

Table 1. Bottle Roll Cyanidation Performance

Test No	Sample ID	P80 µm	NaCN g/L	Measured Au (g/t)	Calc. Head Au (g/t)	Recovery Au (%)	Residue Au (g/t)
C1	1308701	80	1.0	8.55	8.18	95.7	0.35
C2	1308707	89	1.0	2.53	2.76	91.0	0.25
C3	SE13-001-005	86	1.0	1.95	1.98	93.2	0.14
C4	SE13-002-007	106	1.0	0.71	0.68	83.8	0.11
C5	SE13-002-008	103	1.0	9.99	8.36	95.1	0.41
C6	SE13-002-013	101	1.0	1.76	1.58	93.4	0.11

Table 1. Bottle Roll Cyanidation Performance (Silver)

Test No	Sample ID	P80 µm	NaCN g/L	Measured Ag (g/t)	Calc. Head Ag (g/t)	Recovery Ag (%)	Residue Ag (g/t)
C7	1308705	95	1.0	138	163.5	89.7	16.9
C8	SE13-01-006	182	1.0	53.7	51.5	60.6	20.3
C9	SE13-02-005	174	1.0	81.6	80.5	84.1	13.0
C10	SE13-02-015	96	1.0	158	161.8	92.6	12.0

During the 2016 year, the Company entered into an option and joint venture agreement with Trifecta Gold Ltd. (“Trifecta”) whereby Trifecta can earn up to a 75% interest in the Squid East and Squid West claim blocks. For the initial 60%, Trifecta must make cash payments of \$45,000 (\$10,000 received) and issue 6,500,000 Trifecta shares both over a three-year period (1 million shares are currently receivable pending Trifecta obtaining public company listing status) and incur \$2,250,000 in work expenditures (\$500,000 by first anniversary) over the three year period. Trifecta may then form a 60/40 joint venture or elect to earn an additional 15% by paying the Company \$50,000 and 3,500,000 Trifecta shares within 60 days of the third anniversary date as well as incur an additional \$1 million in work expenditures by the fourth anniversary.

(d) Jackson’s Arm

The Jackson’s Arm property consists of 53 staked claim units totaling 1,325 hectares and is located in north-central Newfoundland. The Company owns a 100% interest in the project.

During the 2016 year, the Company entered into an option agreement, (the “Jackson’s Arm Agreement”) with Anaconda Mining Inc. (“Anaconda”), whereas Anaconda has the right to acquire a 100% undivided interest in the Company’s Jackson’s Arm property. To earn a 100% interest in the Jackson’s Arm property, Anaconda is required to make aggregate payments to the Company of \$200,000 in cash (\$20,000 received), and 500,000 common shares of Anaconda (50,000 shares received) over a three-year period. The Jackson’s Arm Agreement provides for a two percent (2%) net smelter returns royalty (“NSR”) to the Company on the sale of gold bearing mineral products from the Jackson’s Arm property. The NSR is capped at \$1,500,000, after which, the NSR will be reduced to one percent (1%). Anaconda is required to spend a total of \$750,000 in qualified exploration expenditures on the Jackson’s Arm property during the option period.

(e) Staghorn

During 2008, the Company entered into an option agreement with local prospectors to earn a 100% interest in a group of 76 claim units spread over 1216 hectares in the Wood Lake area in west central Newfoundland. The Staghorn Gold Property covers a number of gold showings including the South Wood Lake Porphyry Zone. This showing was initially found by the prospectors in 2002 as the result of gold panning and geochemistry which resulted in subsequent trenching and a limited diamond drill program. This work defined the porphyry as an approximately 20 meter to 50 plus meter wide altered “dyke”, highly anomalous in gold and open in all directions. Two drill holes, 50 meters apart were drilled into the dyke and produced composite values of 1.47 g/t Au over 22.5 meters and 0.23 g/t Au over 52.9 meters (source: 2004/05 Assessment Report on The Staghorn Property for Candente Corp., December 2005 and (Source: NR, TSX:V - DNT, May 30, 2005). A 15km grid was cut and soil sampling and geophysical surveying conducted as well.

Terms of the option agreement include making a series of staged option payments totaling \$95,000 and issuing 250,000 shares to the vendors over three years. The vendors will retain a 2% Net Smelter Royalty, 50% of which can be purchased for \$1,000,000.

During 2009, the Company announced the identification of a bulk tonnage gold target on its Staghorn gold property. Gold is associated within a highly altered (silicified, albitized and sericitized) felsic intrusive, which is overprinted by a quartz stock work system and pervasive arsenopyrite and pyrite mineralization. The recently completed ground geophysics survey has defined the altered porphyry as a magnetic low which can be traced over 1000 meters.

Several phases of diamond drilling was undertaken mainly targeting the Woods Lake Zone with results including 1.37 g/t gold over 26.31 meters and 2.16 g/t gold over 12.6 meters.

On August 18, 2014, the Company announced that it has discovered high-grade granitic boulders along the Cape Ray/Victoria Lake fault zone on its Staghorn property. The regional fault zone hosts a number of gold deposits including Marathon Gold's Valentine Lake deposit, located 32 kilometers to the northeast of the auriferous boulders. This latest discovery is located in the northeast part of the property, in an area of little previous work, and opens up a new prospective area for further exploration.

The boulders are described as angular to subangular, and consist of altered and foliated granite containing variable amounts of pyrite and arsenopyrite. A total of 14 samples was taken from the numerous boulders, which varied in size from 0.10 to 0.75 meters. The boulder train is approximately 175 meters in length. Assays from the 14 samples ranged from 1 parts per billion to 19.1 grams per tonne (g/t).

Note: The above samples are samples collected from boulders, are selective by nature and are unlikely to represent average grades on the property.

During 2014, the Company executed an Option/Joint Venture agreement on the Staghorn project with Benton Resources Inc. (“Benton”) (a company related to Metals Creek by common directorships) whereby Benton can earn up to a 70% interest in Staghorn. Pursuant to the agreement, Benton can earn an initial 60% interest by making cash payments totaling \$50,000 (\$10,000 received on signing), issuing a total of 500,000 shares of Benton (100,000 received on signing) and incurring work expenditures totaling \$500,000, all over a three year period. Benton will be the operator during the earn in period. Once a 60% interest is earned by Benton, either a 60/40 joint venture will be formed, or Benton may elect to earn an additional 10% interest to bring its total property interest to 70% by paying

\$50,000 cash and issuing an additional 500,000 Benton shares within 60 days of the 3rd anniversary date and incurring an additional \$500,000 in exploration expenditures by the 5th anniversary date.

During 2015, the Company was advised by Benton as to the results of bottle roll leaching on the recently discovered gold-bearing granitic boulder train termed Ryan's Hammer on the property. The sample had a calculated head grade of 2.24 ppm gold and results of the cyanide bottle roll test include recoveries of 82.6%, 89.3% and 92.3% gold after 24, 48, and 72 hours respectively.

Several phases of prospecting has taken place with the discovery of several new gold occurrences with assays ranging from 5 ppb gold to 7.66 g/t gold along with a detailed soil survey. Several areas of anomalous gold values have been identified.

During 2015, Benton advised the Company that they made a significant visible gold discovery at the project. Earlier prospecting this summer along the north eastern portion of the project identified mineralization grading 19-20 g/t gold in outcrop. Subsequent follow-up discovered visible native gold associated with quartz veining within a large iron-carbonate shear zone. Assays from new follow-up selective grab samples graded from trace up to 189.2 g/t gold. The shear zone has been traced intermittently over more than 2km with other grab samples returning trace to 2.5gpt gold. Five small overburden / till samples were collected over 120m across strike at the visible gold showing of which three contained a few fine grains of native gold in the panned concentrate.

In addition, further Prospecting by Benton to follow up on soil sampling has resulted in the discovery of additional high grade boulders on the Ryans Hammer trend with selective grab samples from numerous large angular mineralized boulders, interpreted to be subcrop, continuing to return encouraging results. The most recent results from four new well mineralized samples assayed 0.62 g/t, 1.5 g/t, 7.7 g/t and 27.8 g/t gold.

During 2015, Benton advised the Company that they have received their drill permit for drilling on the property. As a result, Benton initiated a 1000m to 1500m diamond drilling program to test multiple gold showings, soil geochemical and geophysical anomalies identified by Benton during this summer's exploration program. One of the priority drill targets will be the high grade Ryan's Hammer trend. Drilling will also test the Rich House zone where selective grab samples returned assays ranging from trace up to 189.2 g/t gold.

(f) Other Properties

Included in Other Properties (located in Ontario and Newfoundland) are the Tilt Cove; Tally Pond; Feagan Lake; Mealy Intrusion; Victoria Lake and Clark's Brook and Rogerson Lake properties. During the year ended December 31, 2016 the Company incurred \$53,212 (March 31, 2016: \$9,132) in pre-acquisition exploration and evaluation costs which were included in expenses for the year. In addition, due to no current work plans, the Company wrote off exploration and evaluation expenditures totaling \$2,127 (March 31, 2016 - \$7,812) during the period related to other properties.

Feagan Lake

The Feagan Lake claim block consists of 14 claims totaling 179 contiguous claim units and is located northwest of Hearst, Ontario.

During 2014, the Company executed an option agreement with Xmet pursuant to which Xmet has the option to earn a 60% interest in the Feagan Lake Graphite project. In order to earn a fifty percent (50%) interest in the claims, Xmet has agreed (a) to make a cash payment of \$5,000 (received) and issue 1,000,000 common shares (received) to Metals Creek, forthwith after receiving the approval of the Exchange (received); (b) carry out \$60,000 in work obligations (completed), make a cash payment of \$15,000 (received) and issue a further 1,000,000 shares (received) to Metals Creek within five months of Exchange approval; (c) carry out a further \$150,000 in work obligations and perform a minimum 500m of drilling within one year of Exchange approval; (d) carry out a further \$250,000 in work obligations and issue 500,000 shares to Metals Creek within two years of Exchange approval; and (e) carry out a further \$425,000 in work obligations and issue 500,000 shares to Metals Creek within three years of Exchange approval. Xmet may then increase its interest from fifty percent to sixty percent within 90 days after earning its fifty percent interest by making a cash payment of \$100,000, issuing 1,500,000 shares to the Optionor and conducting \$1,000,000 in work obligations over the next year. Xmet may at any time accelerate its obligations to earn its interest earlier. Once Xmet's interest is earned, the project will continue as a joint venture with Metals Creek.

Clark's Brook Property, NL

During the year ended December 31, 2016, the Company sampled 7.8 g/t Au in outcrop at the Clarks Brook West showing on its 100% owned Clarks Brook project in central Newfoundland. The property was staked after a review of historic work completed on the property and initial due diligence performed on the Clark's Brook Showing. Clarks Brook West is located approximately 2 kilometers west of the Clark's Brook showing. Sampling by the Company at Clark's Brook West returned outcrop samples ranging from 33 parts per billion (ppb) to 7,851 ppb gold (Au). Another outcrop grab sample in the same area assayed 86.1 % Lead and 25g/t silver. The Clark's Brook West Showing is comprised of chalcedony quartz veins and quartz breccia cross cutting a granitic intrusion. The surface grab samples mentioned are selective by nature and are unlikely to represent average grades of the property. Metals Creek is actively seeking a joint venture partner for this project.

Rogerson Lake

During the year ended December 31, 2016, the Company announced that in light of a recent staking rush in central Newfoundland, the company has acquired by staking a 100% interest in 60 units (The Rogerson Lake claims) in central Newfoundland. The Rogerson Lake claims are located adjacent to Marathon Gold's Valentine Lake Project and is contiguous with, and lying on the same structure as Altius Minerals Corp.'s recently announced Alder gold zone discovery. These new claims are approximately 3 km west of the Alder and Birch zone discoveries made by Altius Minerals. In recent weeks over 5,000 claim units have been staked by various parties including Altius Minerals and Prospector Shawn Ryan. The staking is centred on the northeast trending Rogerson Lake Conglomerate which is interpreted to be an extension of the auriferous Cape Ray Fault zone to the southwest.

On September 20, 2016, Altius Minerals announced the discovery of widespread and high-grade gold occurrences, including the Alder zone, northeast of the Valentine Lake deposits along the same structural trend hosting Marathon Gold Corp.'s (greater-than-one-million-ounce) Valentine Lake project. Metals Creek is currently compiling all historical data available and is planning to complete a phase 1 reconnaissance prospecting program.

Tilt Cove

During the 2016 year, the Company entered into an option agreement, (the "Agreement") with Anaconda Mining Inc. ("Anaconda"), whereas Anaconda has the right to acquire a 100% undivided interest in the Company's property. To earn a 100% interest in the Tilt Cove property, Anaconda is required to make aggregate payments to Metals Creek of \$200,000 in cash (\$20,000 received), and 500,000 common shares of Anaconda (50,000 shares received) over a three-year period. The Tilt Cove Agreement provides for a one percent (1%) NSR to the Company on the sale of gold-bearing mineral products from the Tilt Cove property. Anaconda is also assuming an existing two percent (2%) NSR (the "Existing NSR") on one of the two licenses that comprises the Tilt Cove property. One percent (1%) of the Existing NSR is purchasable for \$1,250,000. Anaconda is required to spend a total of \$750,000 in qualified exploration expenditures on the Tilt Cove property during the option period.

Rose Gold

Subsequent to March 31, 2017, the Company, jointly with Benton Resources Inc. ("Benton") executed a letter of intent (the "Agreement") with a Newfoundland prospector (the "Vendor") pursuant to which Benton and the Company have been granted the option to acquire a 100% interest (50% each) in 22 claim units (the "Property") located in the Victoria Lake area, Central Newfoundland.

Under the Agreement, the Company and Benton will make staged payments to the Vendor totaling \$45,000 (\$5,000 on signing and subsequently paid) and 425,000 common shares (50,000 on signing) over a three year period. All cash and share payments will be split 50% Benton and 50% Metals Creek. The Vendor will retain a 2% net smelter return ("NSR") on the Property. The Company and Benton will have the right to buy back 1% of the NSR for \$1,000,000. This transaction is subject to TSX Venture Exchange approval as well as a due diligence period expiring June 15, 2017. The optioned property will be folded into the Staghorn Project in which Benton is earning a 60% interest.

The optioned property is contiguous with the northeast boundary of the Staghorn Gold Project. Recent prospecting by the Vendor resulted in the discovery of several areas of mineralized outcrop and float along a 1.6 kilometer strike

length on the Property. Selective grab samples submitted by the vendor returned gold values up to 18.86 grams per tonne (“gpt”), 61gpt silver, 1.7% copper, 0.59% lead, 0.15% antimony, and 2.76% zinc (not all in same sample). Most of the gold-bearing samples are described as quartz-carbonate material with varying amounts of pyrite, chalcopyrite, arsenopyrite and galena. Highlights from the most recent samples collected from an outcropping area of a gossanous felsic volcanic unit cut by numerous quartz veins where three of these samples returned assays of 18gpt, 7gpt and 1gpt gold. The mineralization appears to be related to an east-west fault that traverses the property and may be a splay off the auriferous Cape Ray Fault system. Benton and Metals Creek plan on a completing a property review once spring breakup is over and weather conditions allow for additional sampling. This new acquisition enhances the value of the Staghorn Gold Project and adds a number of new untested gold targets to the project. (See also Subsequent Event).

OFF-BALANCE SHEET ARRANGEMENTS

The Corporation has not entered into any off-balance sheet arrangements.

RELATED PARTY TRANSACTIONS

The Company paid or accrued the following amounts to related parties during the periods ended March 31, 2017 and 2016:

Payee	Description of Relationship	Nature of Transaction	March 31, 2017 Amount (\$)	March 31, 2016 Amount (\$)
Stares Prospecting Ltd.	Company controlled by Alexander Stares, Director and Officer	Payments for field services and equipment rentals capitalized in deferred development expenditures	850	-
Eastrock Exploration/ Wayne Reid	Company controlled by Wayne Reid, Director and Officer	Payments for geological consulting services and reimbursement of expenses	7,200	7,200
Nick Tsimidis	Director and Officer	Payments for consulting fees and reimbursement of expenses	4,000	4,500

The purchases from/fees charged by related parties are in the normal course of operation and are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

During the period ended March 31, 2017 the Company received from Benton Resources Inc. nil (December 31, 2016 - \$10,000) common shares of Benton pursuant to an option and joint venture agreement entered into by the Company and Benton on the Company’s Staghorn property. Benton is related to the Company by common directorships.

Included in accounts payable and accrued liabilities at March 31, 2017 is:

- \$5,520 payable to Eastrock Exploration Inc., (March 31, 2016: \$5,424) (inclusive of HST)

During the period ended March 31, 2017 the Company recovered 1,088 in wages from a company related by common directorships for the use of the Company’s field geological personnel (March 31, 2016 - \$3,698)

Key management personnel remuneration during the period ended March 31, 2017 included \$82,895 (March 31, 2016 - \$83,325) in salaries and benefits and \$31,123 (March 31, 2016 - \$44,131) in share-based payments. There were no post-retirement or other long-term benefits paid to key management personnel during the period.

CURRENT AND FUTURE CHANGES IN ACCOUNTING POLICY INCLUDING INITIAL ADOPTION OF INTERNATIONAL FINANCIAL REPORTING STANDARDS ('IFRS')

Statement of Compliance

The financial statements, including comparatives for period ended March 31, 2017, have been prepared using accounting policies in compliance with IFRS as issued by the International Accounting Standards Board ("IASB").

Future Accounting Changes

The following standards are effective for annual periods beginning on or after January 1, 2016, with earlier adoption permitted. The Company has not early adopted these standards and is currently assessing the impact they will have on the financial statements.

IFRS 9, Financial Instruments effective for annual periods beginning after January 31, 2018. The standard is the first part of a multi-phase project to replace IAS 39, Financial Instruments: Recognition and Measurement. The Company is currently assessing the impact, if any, adoption of this standard will have on the financial statements.

RISK MANAGEMENT

The Company's financial instruments are exposed to certain risks, including credit risk, liquidity risk, interest rate risk and market risk.

Credit Risk

Counterparty credit risk is the risk that the financial benefits of contracts with a specific counterparty will be lost if a counterparty defaults on its obligations under the contract. This includes any cash amounts owed to the Company by those counterparties, less any amounts owed to the counterparty by the Company where a legal right of offset exists and also includes the fair values of contracts with individual counterparties which are recorded in the financial statements.

i) Trade credit risk

The Company is in the exploration stage and has not yet commenced commercial production or sales. Therefore, the Company is not exposed to significant credit risk and overall the Company's credit risk has not changed significantly from the prior period.

ii) Cash and cash equivalents

In order to manage credit and liquidity risk the Company's cash and short term investments are held through large Canadian Financial Institutions. Staking security deposits are held by the Government of Newfoundland.

iii) Derivative financial instruments

As at March 31, 2017 the Company has no derivative financial instruments.

Liquidity Risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company manages liquidity risk through the management of its capital structure. The Company monitors and reviews current and future cash requirements and matches the maturity profile of financial assets and liabilities. Accounts payable and accrued liabilities are due within the current operating period.

Interest Rate Risk

The Company's interest revenue earned on cash and or short-term investments is exposed to interest rate risk. The Company does not enter into derivative contracts to manage this risk. The Company's exposure to interest rate is very low as the Company's short term investments are either fully liquid or bear short staggered maturity dates to mitigate the risk of fluctuating interest rates.

The Company limits its exposure to interest rate risk as it invests only in short-term investments at major Canadian financial institutions.

Market Risk

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices and is comprised of currency risk, interest rate risk, and other price risk. The Company currently does not have any financial instruments that would be impacted by changes in market prices.

OTHER MD&A REQUIREMENTS

Additional disclosure for Venture Issuers Without Significant Revenues:

As of March 31, 2017, there has been \$5,086,134 incurred and capitalized as exploration and evaluation assets since inception of the Company net of write-downs and recoveries.

Outstanding Share Data and Convertible Securities as at May 25, 2017

As at May 25, 2017 the Company has 44,946,269 common shares issued and outstanding (see events surrounding share consolidation) as well as:

- stock options to purchase an aggregate of 4,279,289 common shares expiring at various dates between July 2017 and March 2022 and exercisable at various prices between \$0.10 and \$0.70 per share
- warrants to purchase an aggregate of 21,932,466 warrants expiring between September 2017 and August 2019 exercisable between \$0.10 and \$0.18 per share.

For additional details of share data, please refer to note 8 of the March 31, 2017 audited financial statements.

The Corporation is authorized to issue an unlimited number of voting shares and an unlimited number of preferred shares issuable in series.

During the period ended March 31, 2017, the Company granted 100,000 to an advisor of the Company at an exercise price of \$0.10 and expiring in March 2022, five years from the date of grant. During the year ended December 31, 2016, the Company granted 3,735,000 options to directors, officers, employees and consultants of the Company at an exercise price of ranging from \$0.10 to \$0.16 per share and term of 5 years from the date of grant.

SUBSEQUENT EVENT

Subsequent to March 31, 2017, the Company and Benton Resources Inc. (“Benton”) (a company related by common directors) jointly executed a letter of intent (the “Agreement”) with a Newfoundland prospector (the “Vendor”) pursuant to which the Company and Benton have been granted the option to acquire a 100% interest (50% each) in 22 claim units (the “Property”) located in the Victoria Lake area, Central Newfoundland.

Under the Agreement, the Company and Benton will make staged payments to the Vendor totaling \$45,000 (\$5,000 on signing) and 425,000 common shares (50,000 on signing) over a three year period. All cash and share payments will be split 50% the Company and 50% Benton. The Vendor will retain a 2% net smelter return (“NSR”) on the Property. Metals Creek / Benton will have the right to buy back 1% of the NSR for \$1,000,000. This transaction is subject to TSX Venture Exchange approval as well as a due diligence period expiring June 15, 2017. The optioned property will be folded into the Staghorn Project which Benton is currently earning a 60% interest.

In addition, the Company and Benton have staked an additional 30 claim units to the north and west of the optioned claims.

DIVIDEND POLICY

No dividends have been paid on any shares of the Corporation since incorporation, and it is not contemplated that any dividends will be paid in the immediate or foreseeable future.

LEGAL PROCEEDINGS

To the knowledge of the Corporation, there are no actual or pending legal proceedings to which the Corporation is or is likely to be a party or of which any of its assets are likely to be subject.

INDEBTEDNESS OF DIRECTORS, OFFICERS, PROMOTERS AND OTHERS

No director, officer, or promoter or other member of management of the Corporation, or any Associate or Affiliate of any such person, is or has been indebted to the Corporation.

CONFLICTS OF INTEREST

There are potential conflicts of interest to which the directors and officers of the Corporation will be subject in connection with the operations of the Corporation. Some of the directors and officers have been and will continue to be engaged in the identification and evaluation, with a view to potential acquisition of interests in businesses and corporations on their own behalf and on behalf of other corporations, and situations may arise where the directors and officers will be in direct competition with the Corporation. Conflicts, if any, will be subject to the procedures and remedies under the Business Corporations Act (Ontario).

RISK FACTORS

Risks associated with exploration and mining operations

The exploration and development of mineral properties involves a high degree of risk which cannot be avoided despite the experience, knowledge and careful evaluation of prospective properties by management. There can be no assurance commercial quantities of ore will be discovered on the Corporation's mineral properties. Even if such commercial quantities are subsequently discovered by the Corporation's exploration efforts, there can be no assurance such properties can be brought in to commercial production.

Operations may be subject to disruption due to weather conditions, labour unrest or other causes beyond the control of the Corporation. Hazards such as unexpected formations, pressures, flooding, or other conditions over which the Corporation does not have control may be encountered and may adversely affect the Corporation's operations and financial results.

The properties may be subject to prior unregistered agreements or transfers or land claims, including First Nations land claims and title may be affected by undetected defects. There is no guarantee that title to the Company's properties or its rights to earn an interest in its properties will not be challenged or impugned. Also, in many countries including Canada and the USA, claims have been made and new claims are being made by aboriginal peoples that call into question the rights granted by the governments of those countries in respect of resource properties.

Environmental Risks

Environmental legislation is continuing to evolve such as will require strict standards and enforcement, increased fines and penalties for non-compliance, more stringent assessment of proposed projects and a greater degree of corporate responsibility. There can be no assurance that future changes to environmental legislation may not adversely affect the Corporation's operations.

Mineral Market

The market for minerals is subject to factors beyond the Corporation's control, such as market price fluctuation, currency fluctuation and government regulation. The effect of such factors cannot be accurately calculated. The existence of any or all such factors may restrict the access to a market, if same exists, for the sale of commercial ore which may be discovered.

Funding Requirements

In order to move forward with its exploration and development activities, the Corporation will likely require additional funding. There can be no guarantee that such funds will be available as and when required or, if available, be accessible on reasonable commercial terms.

Reliance on Management

The Corporation anticipates that it will be heavily reliant upon the experience and expertise of management with respect to the further development of the mineral properties. The loss of any one of their services or their inability to devote the time required to effectively manage the affairs of the Corporation could materially adversely affect the Corporation.

AUDITORS, TRANSFER AGENTS AND INVESTOR RELATIONS

The auditors of the Corporation are Wasserman Ramsay, Chartered Accountants of Markham, Ontario.

The Transfer Agent and Registrar for the Common Shares of the Corporation is TMX Equity Transfer Services of Toronto, Ontario.

The Company has engaged Star Finance GmbH to provide investor relations services via a 12 month contract expiring in September 2017. Investor Relations services were previously provided by Paradox Public Relations Inc. ("Paradox") of Montreal, QC (See Commitments and Contingencies).

COMMITMENTS AND CONTINGENCIES

Except as otherwise discussed, the Company is in compliance with commitments required by contractual obligations in the normal course of business.

The Company has an obligation to expend \$411,637 on qualified Canadian exploration expenditures related to a private placement from which flow-through shares were issued during the 2016 fiscal year. These funds must be fully expended on qualified Canadian exploration expenditures by December 31, 2017. The Company is in compliance with all mineral property obligations to the best of the Company's knowledge.

During the year ended December 31, 2015, the Company the Company hired Paradox for investor relations. The agreement is for a minimum of three months and maximum of 24 months, at a monthly fee of \$5,500. In addition Paradox will also receive 57,143 stock options (400,000 pre-consolidation) to acquire the same number of common shares of the Company at \$0.70 per share (\$0.10 per share pre-consolidation). These options are subject to the vesting provisions under the Company's stock option plan. During the 2016 year, the Company terminated its agreement with Paradox and the options expired during the current year.

During the 2016 fiscal year, the Company retained Star Finance GmbH ("Star Finance") to provide investor relations services. The contract is for a period of 12 months commencing on September 1, 2016. Under the terms of the contract, the Company will pay Star Finance \$9,000 on a quarterly basis, reimburse Star Finance for certain pre-approved expenses, and is granting Star Finance options to purchase 400,000 common shares of the Company at an exercise price of \$0.16 per share vesting in stages over a period of twelve months from the date of grant.

FORWARD LOOKING STATEMENTS

This management discussion and analysis contains certain forward-looking statements relating but not limited to the Corporation's expectations, intentions, plans and beliefs. Forward-looking information can often be identified by forward-looking words such as "anticipate", "believe", "expect", "goal", "plan", "intend", "estimate", "may" and "will" or similar words suggesting future outcomes, or other expectations, beliefs, plans, objectives, assumptions, intentions or statements about future events or performance. Forward-looking information may include reserve and resource estimates, estimates of future production, unit costs, costs of capital projects and timing of commencement of operations, and is based on current expectations that involve a number of business risks and uncertainties. Factors that could cause actual results to differ materially from any forward-looking statement include, but are not limited to, failure to establish estimated resources and reserves, the grade and recovery of ore which is mined varying from

estimates, capital and operating costs varying significantly from estimates, delays in obtaining or failures to obtain required governmental, environmental or other project approvals, inflation, changes in exchange rates, fluctuations in commodity prices, delays in the development of projects and other factors. Forward-looking statements are subject to risks, uncertainties and other factors that could cause actual results to differ materially from expected results.

Potential shareholders and prospective investors should be aware that these statements are subject to known and unknown risks, uncertainties and other factors that could cause actual results to differ materially from those suggested by the forward-looking statements. Shareholders are cautioned not to place undue reliance on forward-looking information. By its nature, forward-looking information involves numerous assumptions, inherent risks and uncertainties, both general and specific, that contribute to the possibility that the predictions, forecasts, projections and various future events will not occur. The Corporation undertakes no obligation to update publicly or otherwise revise any forward-looking information whether as a result of new information, future events or other such factors which affect this information, except as required by law.
